Rotary Joints

Solutions for safe transfer of fluids

MP series

Multi-passage joint type **MP**

- Design with radial shaft seal with elastic contact. Seal design to be selected according required media and performance.
- Rotor made of stainless steel, at sealing areas hardened or with metal ceramics.
- Housing of brass, aluminium, steel – depending on application data.
- Threaded connections are G/BSP (ISO 228). Other threads such as NPT (ANSI) are available on request.
- Ball bearings lubricated for lifetime.
- Flange of the rotor can be custom-made on request.
- One or two threaded holes in the housing are provided for anti-rotation device.
- For multi-media applications double seals and drain holes are provided to prevent cross contamination of fluids.
- By means of many possible variations of sizes, materials and seals MP series covers a wide scope of applications. MP rotary joints can be combined with a slip ring or another rotary joint or with hollow shaft rotary joints or can be designed with multi-ports at the housing, just to give examples of various possibilities.

MP multi-passage joints are suitable to transfer:

- **Hydraulic oil**
- **Water**
- **Air**
- **Gas**
- **Vacuum**

• *Dimensions on pages 4 and 5*

Combijoint type **MPE**

MP rotary joint with two or four passages and slip ring with gold/gold contacts.

• *Page 6*

Hollow shaft type **MPH**

Simplest version of series MP with one passage and hollow shaft. The radial connection at the housing corresponds to the customer's shaft inlet. The technical characteristics are the same like series MP. Multi-passage versions are available on request.

• *Page 7*

Rotary joint type **MPT**

Two way design with two mechanical seals. Transfer of one fluid in and out, suitable for higher speed by means of mechanical seal. Custom made design on request.

• *Page 8*

Rotary joint type **MPV**

One to four way designs with gap seal bushes – "hydrostatic relief". Gap seals create controlled leakage recirculated to the hydraulic unit. With this technology it is possible to transfer the medium at high speed and high pressure simultaneously.

Consecutive number for special designs, numbering by factory ▶ ▶					

Characteristics

Type MP is equipped with radial shaft seals for elastic contact. One or several media can be transferred contemporaneously through 2 to 10 passages. The sealing elements tighten the radial transfer between housing and rotor. The product is available according to catalog dimensions or on request with custom made flanges and/or axial hole for electric cables, axial inlets and/or radial outlets, drains between different media. Type MP can be used for individual combinations on request. The dimensions for 2 to 10 passages shown in the table as standard design are a first indication of the technical potential of this type.

Application Data

- Pressure PN max: → 200 bar* for oil.
10 bar for gas, air, water.
- Speed max: → 200 rpm*
- Temperature max: → 80°C
- Filtration ratio: → 50 µm

* Avoid combination of maximum values. For correct selection get in contact with the factory.

MP1020-MP0625-MP0825-MP1025: Dimensions on request.
Subject to technical change without notice.

Characteristics

Type MPE is a multi-pass rotary joint called Combijoint with 2 or 4 passages including a slip ring with gold/gold contacts for 6/12/18 poles. The slip ring can transfer power, signals, digital data, field bus. Standard protection is IP 64. The fluid transfer can be realised with type MP02 or MP04 and is suitable for hydraulic oil, water, gas or air and with central bore for electric cables. Housing design with radial connections G/BSP (ISO 228).

Application Data

- Pressure PN max: 200 bar* for Oil.
10 bar for Gas, Air, Water.
- Speed max: 200 rpm*
- Temperature max: 80°C
- Filtration ratio: 50 µm
- Voltage: mV – 500V
- Current: mA – 24A

* Avoid combination of maximum values. For correct selection get in contact with the factory.

Characteristics

Type MPH 01 is designed as hollow shaft rotary joint, suitable for an over-the-shaft-mounting or shaft ends. The radial seals operate on a shaft sleeve. Sealing technology uses radial seal elements with elastic contacts sealing the radial transfer between housing and shaft sleeve. Also available for more than one passage. Housing design with radial connections G/BSP (ISO 228).

Application Data

- Pressure PN max: 200 bar* for Oil.
10 bar for Gas, Air, Water.
- Speed max: 200 rpm*
- Temperature max: 80°C
- Filtration ratio: 50 µm

*Avoid combination of maximum values. For correct selection get in contact with the factory.

Characteristics

Type MPT is a two way design to transfer water or air or hydraulic oil at low pressure, only one medium. Different media could mix up in case of leakage. Seal design with mechanical seals, therefore suitable for higher speed. Material for rotor and housing depending on medium. Housing design with radial connections G/BSP (ISO 228). Axial housing connection on request.

Rotor design with fixed flange or for K-flange and inner rings.

Application Data

- Pressure PN max: 10 bar*
- Special version: 25 bar
- Speed max: 1.000 rpm*
- Temperature max: 80°C
- Filtration ratio: 50 µm

* Avoid combination of maximum values. For correct selection get in contact with the factory.

Characteristics

Type MPV is a 1 to 4 way design to transfer hydraulic oil at high speed and high pressure contemporaneously. Design is made with gap seal bushes – “hydrostatic relief”. Gap seals create controlled leakage, predictable and remaining within acceptable limits recirculated to the hydraulic unit. Housing in aluminium, rotor in steel. Stainless steel upon request. Rotor design with fixed flange or male thread right-hand or left-hand in G/BSP (ISO 228). Housing design with radial connections G/BSP (ISO 228).

Application Data

- Pressure PN max: → 200 bar for Oil.
- Pressure PN min: → 3 bar
- Speed max: → 8.000 rpm
- Temperature max: → 80 °C
- Filtration ratio: → 15 µm*

* For correct selection get in contact with the factory.

Special versions and Combijoint

MP series can be used in combination with other MAIER rotary joints (i.e. series DP) or with slip rings. In these cases the group is called Combijoint and manufactured exclusively according to the order of the customer.

Possible applications:

- ▶ *Rotating tables*
- ▶ *Injection moulding machines for plastic materials with rotating tables*
- ▶ *Automation*
- ▶ *Machine tools*
- ▶ *Tanning machines*
- ▶ *Glass machines*
- ▶ *Steel plants*
- ▶ *Machines for food industries*
- ▶ *Filling machines*
- ▶ *Mixers*
- ▶ *Coiling systems*
- ▶ *Robotics*

Example:

Combijoint type: **MP0606A + MP 0606D + SRK80**

MP0606A: 4 ways for water + 2 ways for air

MP 0606D: 6 ways for hydraulic oil

SRK80: Slip ring with 9 poles - 6A - 500V

Speed: 10 rpm

Advantages:

- ▶ *Complete separation of the circuits air / water*
- ▶ *DP rotary joint for water with mechanical seal in Silicon Carbide*
- ▶ *Extended life*
- ▶ *Easy maintenance*

Inquiry form

Company _____ Name _____
 Street _____
 Postal Code _____ City _____ Country _____
 Phone _____ Fax _____ E-mail _____

Technical data

Application* _____
 Number of passages** _____ Nominal Diameter** _____
 Medium / Media _____
 Pressure / s _____ Flow rate / s _____
 Temperature / s _____ Speed _____
 In case of angular movements, please specify:
 Rotating angle _____
 Accomplished which speed _____
 Is the rotation in the same direction Yes or returns back - Yes
 Axial bore request? Yes Bore diameter _____ No
 Mounting: Horizontal Vertical (Flange facing down) Vertical (Flange facing up)

* If possible, please enclose drawing of the application. ** Specify if different sizes.

Technical Data for slip ring selection

Total No. of poles: _____ Voltage max (V) _____ Current max (A) _____
 Type of transmission: Power No. of poles: _____
 Signals No. of poles: _____
 Control No. of poles: _____
 Digital Data No. of poles: _____

Speed: _____
 Mounting: Flange
 Shaft plug-in
 Special connectors required: Yes No
 (If yes, please specify) _____

Protection: IP _____
 Quantity: _____
 Date: _____

Notes: _____
